ACCESSORIES CRF1100L AFRICA TWIN

AFRICA TWIN REACHES NEW HEIGHTS

In 2017, the Africa Twin broke the record for the highest altitude reached by a twin-cylinder motorcycle. After 5 days of acclimatisation, a team of 5 riders piloted the Africa Twin onto the slopes of the world's highest active volcano, the Nevado Ojos del Salado – located between Argentina and Chile. Reaching 5,965 metres above sea level, the international team completed its ascent within 24 hours with Africa Twin specially equipped with Termignoni exhaust, revised final sprockets, new Metzeler MC360TM tyres and a range of Honda genuine accessories. Their route took them – in temperatures as low as minus 5 degrees Celsius – through broken asphalt, gravel, mud, sand and finally stretches of ice pockets known as 'penitentes', underlining once again the Africa Twin's credentials as the best-performing off-road motorcycle in its class.

ACCESSORIES **XL750 TRANSALP**

THE ORIGINAL TRANSALP

The original Transalp, introduced in 1986 with a 583cc V-Twin engine, is something of a legend. And as testament to the sheer quality of its build and timelessness of its design, many can still be seen on Europe's roads today.

This is just what the new XL750 Transalp is built to do, and a legend of adventure touring is thus reborn.

ACCESSORIES X-ADV

TOUGHER THAN THE REST!

During the 2019 Gibraltar Race, a 7,000-km all-terrain rally from Baltic Sea to Atlantic Ocean, Renato Zocchi steered an X-ADV to the Class 2 victory. The rider put also himself as seventh overall in the event, beating out the competition of purpose-built dirt bikes and adventure tourers. While his X-ADV was specially prepared with extra wheel travel and ground clearance, Zocchi kept the footboards and drove its DCT version on Gravel mode.

Another proof that no matter where you want to go, the X-ADV is tougher than the rest to get you there!

DO YOU REALLY NEED A LEFT LEVER TO ENJOY RIDING?

The Dual Clutch Transmission made its worldwide debuts for motorbikes in 2010 with the Honda VFR 1200. Now entering its 3rd generation and downsized to suit mid-displacement bikes, the DCT is completely different from the belt-type transmissions used by most scooters: it is structurally a conventional 6-speed gear ratio transmission, yet electronically controlled when changing speeds. Keep the fun of a manual transmission; enjoy the comfort of an automatic one!
